GEMATREEAC 2=0 TUTORIAL

GemaTreeAC 2=0 is a gematria calculator, numerological classification system and a database. It can be used for gematria- and numerology-based word transformation operations.

Here is the initial situation, when you open GemaTreeAC for the first time:

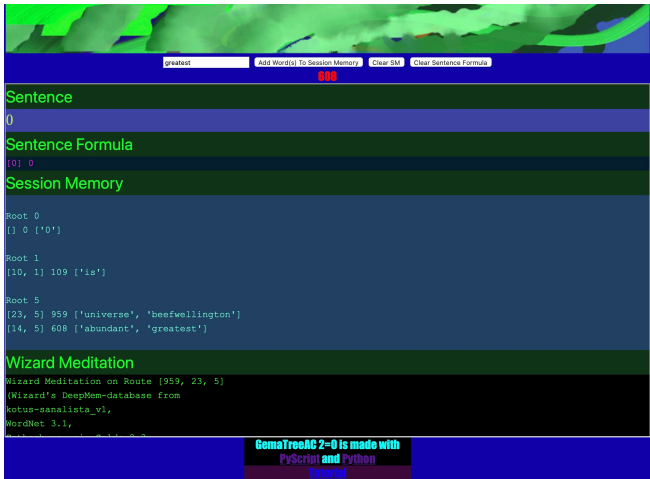

You can add words to Session Memory by writing or copy-pasting text to the input box and pressing the button "Add words to Session Memory"...
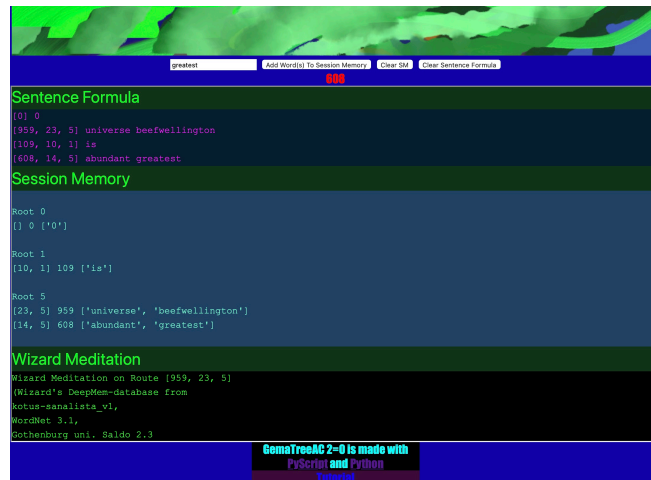

..or by selecting them from the Wizard's DeepMem-database. Wizard Meditation is on one gematria-value. Wizard Meditation view opens by clicking a number on the Session Memory view. You have to add words to the Session Memory to see Wizard Meditation (to search DeepMem-database by number).

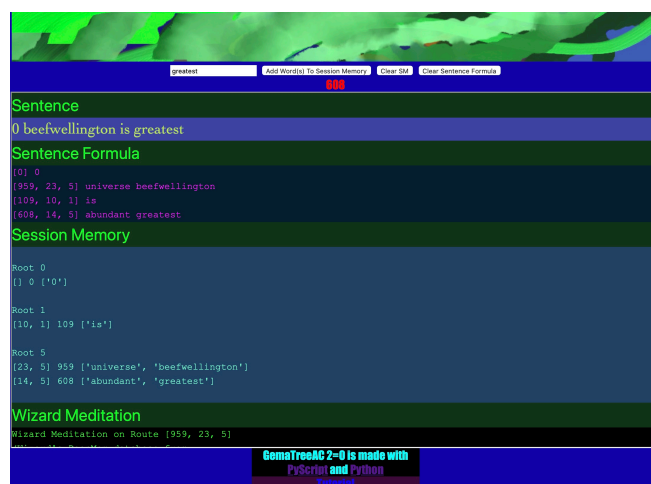

Use Wizard Meditation or the input box to add words with their gematria values to the Session Memory.

Click on the word groups in Session Memory view to add them to Sentence Formula.

Click on optional words in the Sentence Formula view to create sentences in the Sentence view.

Gematria can be used to make prophecies, for encryption, to make meaningful associations of words, to seek meanings in important, holy or otherwise interesting numbers or just for giggles.

Have fun, be well,

—
